I tried to reply to this but I think it got deleted. I think we are missing a factor of a about 10 to account for the difference between our adult RME and Magee's calculations (this is after accounting for his assumed factor of 30 BaP-TE when considering other PAHs). What am I missing?

Hi Linda, can you take a look at Magee's new comments and his old ones (pages 115-117) as they pertain to BaP risk from soil exposure? I think we need to point out some of the differences between his exposure calculations and ours. Sorry, I think I ran out of time to call you today. It's been busy!

There are several people registered to provide public comments. See attachments for 3 sets of public comments and the speaker list.
